Even if EBR were to be wildly successful at this time, when the 20 years post-RODA are up, there will be ~ 200,000 gallons of LNAPL in the area, likely some of it still mobile, able to move into wells -

I understand ST12 surface area is already transferred, but no ICs on the property because AF actively involved, AF is the IC. Wayne, was there a DEUR placed on ST12 at time of transfer?

Carolyn – are there ICs in place already restricting groundwater use at ST012?
